

## **I&E Automation (ODKS) Series Outdoor Weatherized Kiosks Highlights:**

### **Experience Unparalleled Versatility and Durability**

Are you looking for a self-service solution that can withstand the harshest outdoor conditions while delivering a seamless user experience? Look no further! Our Outdoor Weatherized Kiosks (ODKs) are specifically designed to meet the demands of diverse environments, ensuring reliable performance rain or shine.

### **Weatherproof and Tamper-Resistant Design**

With our ODKs, you can rest assured that your investment is well-protected. The kiosks are sealed and weatherproof, safeguarding the internal components from rain, sleet, and snow. Additionally, their rugged construction and vandal-proof tempered glass discourage tampering and ensure consistent operation even in high-traffic public spaces.

### **Wide Range of LCD Sizes and Multi-Touch Capabilities**

We understand that one size doesn't fit all. That's why our ODKs come in a variety of LCD sizes, ranging from 15" to 55". Whether you need a compact kiosk for quick interactions or a large display for immersive experiences, we have you covered. Plus, our 10-point projected capacitive (PCAP) multi-touch displays guarantee intuitive and responsive interactions, even in wet conditions.

### **Optimized Display for Outdoor Visibility**

Sunlight shouldn't hinder usability! Our LCD displays are equipped with an anti-reflective coating and an IR/UV blocking film on the inside of the touch glass. This not only protects the screen from direct sun exposure but also ensures excellent visibility, making information easily accessible even on the brightest days.

### **Built for Extreme Temperatures**

From scorching summers to freezing winters, our ODKs can handle it all. With a temperature range approval of -30°C to 50+°C (-22 to 122°F), you can trust that your kiosk will remain fully functional in a wide range of climates.

### **Optional Solid State Thermal Cooling**

Dirty and dusty environments? No problem! Opt for our optional solid-state thermal cooling solution, which offers sealed airflow without the need for air filters. Your kiosk will stay cool and clean, minimizing maintenance efforts.

### **Secure and Customizable**

Security is paramount in today's world. Our ODKs come with locks and a design that deters tampering and vandalism. Moreover, you can customize your kiosk with various peripherals, such as barcode scanners, MSR with chip readers, fingerprint readers, and more, tailoring it to your specific needs.

### **Durable and Appealing**

We believe that appearances matter. That's why our outdoor kiosks are built to last. With a polyester undercoat and corrosion-resistant zinc primer powder coat overlay, they will maintain their original appearance despite exposure to the elements.

### Choose the Perfect Stand

Whether you prefer a walk-up, drive-up, single post, or dual post stand, we offer a variety of heavy-duty stand options to suit your installation requirements. The ODKS Kiosks are perfect for Access Control, Trucking, and industrial applications.

### I&E Your Outdoor Kiosk Solution Partner

From interactive information centers and ticketing services to secure self-check-ins and advertising platforms, our Outdoor Weatherized Kiosks cater to a wide range of applications. Trust in our kiosks to deliver seamless self-service experiences regardless of the weather, empowering your users while elevating your business.
